

Temporary power distribution box power cable

Summary of Content

Temporary power distribution box power cables are heavy-duty, flexible cables designed to safely connect temporary power boxes to generators, power poles, or equipment, available in various amperages, lengths, and plug types for indoor and outdoor use.

Overview

Temporary power distribution boxes, often called spider boxes, are used on construction sites, events, and industrial settings to distribute electricity from a single source to multiple outlets. The power cables for these boxes are critical for safe and efficient operation, providing the connection between the main power source and the distribution box.

Cable Types and Specifications

- **Amperage Ratings:** Common ratings include 30A, 50A, and up to 600A for industrial applications. The amperage must match the distribution box and the connected equipment.
- **Wire Gauge:** Typical gauges for 50A cords are 6/3 or 8/1, designed to handle high current safely.
- **Voltage Ratings:** Most temporary power cables support 125/250V, suitable for both single-phase and three-phase setups.
- **Plug Types:** Options include straight blade, locking twist-lock, or Powerlock/Camlock connectors, depending on the box and power source.
