

# The distribution box cannot turn off the lighting

## Overview

It can occur due to overloaded circuits, short circuits, or ground faults. Solution: Identify the Cause: Check if the breaker is tripping due to overloading. This often happens when too many devices are plugged into one circuit. Reducing the load on the circuit or redistributing. Before you begin any inspection, you must prioritize safety by locating your circuit panel and turning off the power to the affected light. The distribution fuse box forms the heart of every electrical system and ensures that lighting systems can be operated safely, efficiently and in accordance with standards. It protects cables and devices from. The system has a debugging method for the lighting system, and the electric power system has a debugging method for the power system, which cannot be mixed. Make sure the power supply is. Unsound wiring The wiring in the distribution box should be firm and reliable to avoid loosening or falling off.
