

The secondary distribution box is making noise

Overview

Buzzing, humming, or crackling noises may indicate issues with loose wiring, overloaded circuits, faulty breakers, or loose connections. Assess the severity of the noise, check for safety hazards, and determine if professional assistance is needed. Distribution boxes are the unsung heroes of our electrical systems, quietly managing power until something goes wrong. When they start tripping, overheating, or making strange noises, it's more than just an inconvenience - it's your home's cry for help. It could be due to loose connections, overloaded fuses, or even a faulty earth leakage circuit breaker. However, like any other component of an electrical system, distribution boards can develop issues over time. Your home's electrical panel, also known as a breaker box, is the central hub that distributes electricity to power your lights, appliances, and devices. When everything is functioning.
