

Three-year warranty anti-tracking multimode optical cable

Summary of Content

Multimode optical cables with anti-tracking features are available with three-year warranties, offering reliable performance for data centers and enterprise networks.

Cable Types and Performance

Multimode fiber optic cables are commonly available in OM3 (50/125 μm) and OM4 (50/125 μm) configurations, optimized for high-speed data transmission over short to medium distances . These cables support multiple wavelengths and are suitable for 10G, 40G, and 100G Ethernet applications. Anti-tracking or anti-interference designs help reduce signal crosstalk and maintain consistent optical performance, which is critical in dense cabling environments .

Connectors and Configurations

These cables come with a variety of connector options, including LC, SC, ST, MTRJ, and MTP/MPO, and are available in pre-terminated lengths or bulk spools up to 1000 ft . Pre-terminated cables simplify installation, reduce downtime, and ensure consistent optical performance through factory testing .

Installation and Flexibility

Multimode cables are designed for both indoor and outdoor use, with flame-retardant jackets for plenum or riser applications, and low-smoke zero halogen (LSZH) options for safety . Compact designs, such as 2mm round LC legs or Skinny-Trunk® harnesses, allow for efficient routing, reduced congestion, and improved airflow in data center cabinets .
