

Turn off the electrical distribution box when not in use

Overview

If your panel doesn't have a main switch, simply turn off all individual circuit breakers to cut power to the home. Before interacting with the electrical panel, a foundational layer of safety must be established to mitigate the risk of electrical shock or arc flash. This switch can be used for emergency switching where required such as if there was a fire or overheating. Older homes may contain an older fuse box that. The purpose of this method is to highlight safe working practices for electrical isolation which is similar as lock out tag out. What Is an Isolation Switch?
