

Type of switch for three-level distribution box

Overview

Fusible switchboards are designed for commercial, industrial, and service entrance applications to protect and switch feeder and branch circuits. Each panelboard unit includes a switching contact structure with an instantaneous trip element. The complete set of products can form a complete three-level protection system for construction electricity, achieving the goal of one machine, one switch, and one protection, which is very suitable for various standard engineering applications. According to the hierarchical. The three-level distribution system refers to a system that distributes electric power through three levels of distribution devices from the incoming power line at the construction site to the electrical equipment. Today, electrical systems are essential for homes and industries. But what exactly is a power distribution box, and why is it so essential in our daily lives?

The DB panel board controls the flow of electricity.
