

Types and Specifications of Distribution Boxes

Summary of Content

Distribution boxes are electrical enclosures that safely distribute power to multiple circuits, classified by installation type, phase, and application, with specifications based on load, protection devices, and enclosure standards.

Overview

A distribution box (DB), also known as a power distribution box, is designed to receive electrical power from a main supply and distribute it safely to multiple outgoing circuits. It houses protective devices such as MCBs, RCDs, RCBOs, fuses, isolators, and surge protective devices (SPDs), ensuring both equipment protection and user safety. Distribution boxes are widely used in residential, commercial, industrial, and outdoor applications.

Classification of Distribution Boxes

By Installation and Mounting

- Surface Mounted DBs: Installed directly on walls, suitable for retrofits and industrial environments.
- Flush Mounted DBs: Embedded into walls for a clean appearance, commonly used in residential and commercial buildings.
- Pole Mounted DBs: Designed for outdoor use, including street lighting and utility applications.

By Electrical Phase
