

UAE Green Cable Tray Specifications

Summary of Content

Green cable trays in the UAE are typically engineered for durability, corrosion resistance, and compliance with IEC 61537, using materials like hot-dip galvanized steel, stainless steel, or aluminum with standardized dimensions and load ratings suitable for harsh Gulf climates.

Material and Finish

Green cable trays are commonly manufactured from mild steel, pre-galvanized steel, hot-dip galvanized (HDG) steel, stainless steel (SS316), or aluminum. HDG steel is the default choice for most industrial and outdoor projects due to its excellent corrosion resistance in high humidity and coastal environments. Stainless steel is preferred for extreme conditions such as offshore platforms or chemical plants, while aluminum offers a lightweight, corrosion-resistant option for moderate environments .

Dimensions and Load Capacity

Cable trays are available in standardized widths and depths to accommodate various cable loads. Typical widths range from 100 mm to 600 mm, with depths from 50 mm to 150 mm, depending on the application. The fill factor is generally limited to 40% to prevent overheating, and a 20-25% space buffer is recommended for future expansion . Load ratings are engineered to meet structural stability and safety standards, ensuring trays can support heavy-duty power and data cables in commercial, industrial, and infrastructure projects .

Types of Cable Trays

- Ladder trays: Ideal for heavy-duty cable runs and mixed power/control cabling, providing excellent ventilation.
