

UK Retail EPON Equipment SFP

Summary of Content

EPON SFPs are compact, hot-pluggable optical transceivers used in the UK to connect Ethernet devices to fiber networks, supporting symmetric 1.25 Gbps data transmission over long distances.

Overview of EPON SFPs

EPON (Ethernet Passive Optical Network) SFPs are small form-factor pluggable transceivers designed for fiber-optic communication. They enable high-speed Ethernet connectivity over long distances and are compatible with switches, routers, media converters, and other networking equipment . EPON SFPs support both single-mode and multi-mode fiber, with speeds typically ranging from 1 Gbps to 10 Gbps, and are available in various form factors including SFP+, XFP, and QSFP .

Types and Functionality

- **OLT SFP Modules:** Installed in the Optical Line Terminal at the central office or street cabinet, these modules manage traffic for multiple subscribers. They typically operate at 1490nm Tx / 1310nm Rx wavelengths and use SC/UPC connectors. Compatibility spans major EPON OLT brands such as Huawei, ZTE, Fiberhome, and VSOL .
- **ONU SFP Modules:** These modules contain the full ONU chipset and can be plugged directly into standard SFP ports on devices like switches or cameras, effectively turning them into EPON clients. They usually operate at 1310nm Tx / 1490nm Rx and support configurable MAC addresses for ISP authentication .
