

Ukrainian fiber optic patch cord is heat resistant

Overview

Yes, an OFSCN® high-temperature resistant fiber optic patch cord can transmit signals effectively when placed in boiling water at 100°C. In fact, 100°C is well within the standard operating range for these specialized components. Suspended fiber optic cables are widely used to build communication lines between power line supports, buildings, telecommunication poles and other structures. They provide reliable data transmission over long distances and are resistant to external factors such as wind, rain, ultraviolet radiation. Equipped with flexible G. A1/A2 fiber, resistant to bending, and LSZH sheath. Equipped with built-in load-bearing elements (FRP rods or aramid threads), which ensures operation in tension. Resistant to wind loads, icing and UV. Fibercord is a manufacturer of high-quality fiber-optic patch cords and pigtails of various modifications. Patch cords route light from one location to another using one or more optical fibers in a single length of jacketing. External optical patch cords.
