

Unable to access the internet after replacing the fiber optic router

Overview

When your internet stops working after changing your router, start with the basics: check physical connections and power, restart your devices, and verify your ISP status. Access your router's configuration to confirm settings are correct and update firmware and drivers as needed. Log in using the router's default username and password, or other general combinations such as username admin; password admin, or username admin; password 1234/0000. I was given a new gateway modem/router. Every device in my house is connected either via ethernet or wirelessly through the mesh network. Specifically, the IP for the default gateway isn't responding at all, and this is a first for me. Many connectivity issues stem from simple. Whether you're a homeowner dealing with intermittent connectivity or a business owner facing slow speeds, this guide equips you with the knowledge to diagnose and resolve issues efficiently. No Internet Connection or Signal Loss 2.
