

Waterproof Installation Solution for Nordic Corrugated Conduit

Summary of Content

For a durable, waterproof installation of Nordic corrugated conduit, use HDPE or PVC corrugated conduits with compatible waterproof fittings and sealants, complemented by Nordic Waterproofing products for external protection.

Choosing the Right Conduit

For waterproof applications, HDPE or PVC corrugated conduits are recommended due to their flexibility, chemical resistance, and environmental durability . These conduits are ideal for routing cables in tight spaces, around corners, and in outdoor or underground installations. HDPE is particularly suitable for trench or ground-mounted runs, while PVC provides excellent UV and moisture resistance for exposed areas .

Waterproof Fittings and Sealing

To ensure a fully waterproof system:

- Use watertight connectors and end caps designed for corrugated conduits. These prevent water ingress at joints and terminations .
- Consider splittable braided conduit connections (like SAT-GF) for retrofitting or maintenance without compromising waterproofing .
- Apply Nordic Waterproofing sealants or membranes at conduit entry points into buildings or infrastructure to protect against rain, humidity, and extreme temperatures .
