

Waterproof distribution box

Summary of Content

A waterproof distribution box is an enclosure designed to protect electrical components from water, dust, and environmental hazards, typically rated IP65–IP68 for outdoor and industrial use.

Overview

A waterproof distribution box safeguards electrical connections, terminals, and miniature modules from moisture, dust, UV exposure, and mechanical impacts, ensuring reliable power distribution in harsh environments . These boxes are widely used in industrial, commercial, photovoltaic, and outdoor applications, including lighting, pumps, and solar systems .

Materials and Construction

- **Housing Materials:** Commonly made from durable plastics such as ABS, polycarbonate, or PC engineering plastics, offering mechanical strength, UV resistance, and lightweight installation . Metal options are also available for higher durability.
- **Sealing Mechanism:** High-grade polyurethane gaskets are injected into the lid groove to create a continuous barrier against water ingress. Heavy-duty stainless steel latches maintain uniform pressure across the seal .
- **Internal Components:** Mounting plates are typically galvanized steel or reinforced fiberglass, with adjustable depth grids and molded mounting pillars to secure circuit breakers, DIN rails, and terminal blocks while isolating components from condensation .
