

Waterproof temperature-controlled server racks for Papua New Guinea metropolitan area network

Summary of Content

For Papua New Guinea metropolitan networks, NEMA-rated and climate-controlled server racks provide water resistance, dust protection, and temperature management for reliable IT operations.

Indoor Server Rack Options

Sharkrack Standard Server Rack (42U, 600mmW x 1200mmD) is ideal for high-density indoor deployments in Port Moresby and other urban areas. It offers extra depth for long servers, 1000kg static load capacity, and cold-rolled steel construction for durability. While not fully waterproof, it provides robust protection against dust and minor water exposure indoors, making it suitable for controlled data center environments . Sysracks 22U Cooled Server Cabinet is a compact, temperature-controlled indoor rack with a built-in cooling system and adjustable configuration. It ensures optimal operating conditions for sensitive electronics, preventing overheating and maintaining data integrity. This rack is suitable for small to medium-sized enterprises or compact metropolitan network nodes . NEMA 12 Dust & Water Resistant Racks provide indoor protection against dust, drips, and light splashes. While not fully waterproof, they offer a higher level of environmental protection than standard racks and are compatible with most 19-inch rack-mounted equipment .

Outdoor and Weatherproof Options
