

Well-known ladder-type cable trays

Summary of Content

Ladder-type cable trays are ideal for supporting heavy-duty cables over long distances, offering excellent ventilation, accessibility, and modular installation options.

Overview of Ladder-Type Cable Trays

Ladder-type cable trays consist of two long side rails connected by evenly spaced rungs, resembling a ladder. This open design allows efficient heat dissipation, easy cable fastening, and straightforward maintenance or future expansion, making them suitable for industrial, commercial, and data center applications. They are particularly effective for long horizontal runs and large power cables, commonly used in petrochemical plants, refineries, thermal power stations, and telecommunications rooms.

Material and Construction

Ladder trays are typically made from galvanized steel, aluminum, or FRP (fiber-reinforced plastic). Steel provides high mechanical strength, aluminum offers corrosion resistance with a lighter weight, and FRP is suitable for highly corrosive environments. For example, Hubbell's NEXTFRAME® Ladder Tray uses 16-gauge tubular steel for a rugged yet lightweight structure, supporting long cable runs and providing smooth bends for cable routing.

Key Features and Benefits

- **Ventilation:** Open rungs allow air circulation, preventing overheating of power and control cables.
