

West Asia Cable Tray Ladder Type

Summary of Content

Ladder type cable trays are open-rung support systems widely used in West Asia for heavy-duty industrial and commercial cable management, offering excellent ventilation, load capacity, and maintenance access.

Overview

Ladder type cable trays, also known as cable ladders or ladder cable racks, are designed with side rails and horizontal rungs to support and route electrical cables, particularly large-diameter or high-voltage cables. Their open design allows for superior ventilation, reducing heat buildup in power and communication cables, and provides easy access for installation and maintenance.

Materials and Construction

Common materials used in West Asia include:

- Steel (hot-dip galvanized or epoxy painted)
 - Aluminum
 - Stainless steel
 - Fiber Reinforced Plastic (FRP) for corrosive or offshore environments
- These materials are selected based on load requirements, environmental conditions, and corrosion resistance. Ladder trays are available in straight lengths of 3–6 meters, with a variety of fittings such as elbows, tees, crosses, risers, and reducers to accommodate directional changes and cable width adjustments.

Applications

Article Content

Cable Ladder Trays (Welded and Swaged)

Cable Ladder Trays (Welded & Swaged) Cable Ladder Trays, are designed to meet most requirements of cable and electrical wire

Catalog Cable Tray Ver Final
