

What accessories are on a distribution box

Summary of Content

A distribution box typically includes circuit breakers, busbars, residual current devices, isolators, surge protection devices, cable glands, and optional smart monitoring modules.

Core Accessories

Circuit Breakers (MCBs): Protect circuits from overloads and short circuits by automatically disconnecting power when faults occur, ensuring safety for connected devices and wiring . **Residual Current Devices (RCCBs/RCDs):** Detect imbalances between live and neutral wires to prevent electric shocks and enhance safety, often installed alongside MCBs . **Busbars:** Copper or aluminum bars that distribute electrical current efficiently to multiple circuits, reducing wiring complexity and supporting modular expansion . **Isolators:** Manually operated switches that allow sections of the circuit to be safely disconnected for maintenance or emergency purposes . **Surge Protection Devices (SPDs):** Protect electrical equipment from transient overvoltages caused by lightning or switching surges . **Cable Glands:** Ensure secure and waterproof entry points for cables, maintaining insulation integrity and preventing moisture ingress .
