

What are the components of fiberglass cable trays in South Korea

Summary of Content

Fiberglass cable trays in South Korea are available in ladder, trough/channel, and perforated types, designed for corrosion resistance, durability, and specialized industrial applications.

Common Types of Fiberglass Cable Trays

1. Ladder Type FRP/GRP Cable Tray

- Features two side rails connected by transverse rungs, allowing excellent ventilation and heat dissipation.
- Ideal for power cables and large-diameter control cables in substations, industrial plants, and power distribution systems.
- Easy to install and modify when adding or removing cables, with varying rung spacing and load classes for light, medium, and heavy-duty applications .

2. Trough or Channel Type Cable Tray

- Consists of a bottom plate with side rails, providing more protection while still allowing some ventilation.
- Suitable for control, communication, and instrumentation cables that require shielding from dust, falling objects, or interference.

- Commonly used in computer networks, sensitive signal circuits, and industrial control systems .

3. Perforated Cable Tray

- Features a series of holes or slots along the tray for ventilation and drainage.
