

What does it mean when a pigtail has one round end and one square end

Summary of Content

A pigtail with one round end and one square end is typically an adapter cable that converts an older round connector (like a 7.9mm DC jack) to a newer square or rectangular plug, often used for laptop power or USB interfaces.

Description and Use

These pigtail cables are designed to convert between different connector types, allowing compatibility between older devices with round jacks and newer devices requiring square or rectangular plugs. A common example is a 7.9mm round female to square male adapter, which can serve as a USB or DC power interface for laptops such as Lenovo ThinkPad models . Some versions include a small integrated IC to ensure proper voltage and device recognition.

Specifications

- Round End: Typically a 7.9mm x 5.5mm female jack, compatible with older DC power inputs .
- Square End: Rectangular male plug, often used for newer USB or laptop power ports .
- Length: Varies by manufacturer; usually short, designed for direct connection between devices.
- Applications: Laptop power adapters, USB charging, or device conversion interfaces.
