

What router should I choose for an 8M fiber optic connection

Summary of Content

For an 8 Mbps fiber connection, even a basic modern Wi-Fi 5 or Wi-Fi 6 router will provide sufficient performance, with no need for high-end multi-gigabit routers.

Key Considerations

Since your fiber plan is 8 Mbps, the router does not need to support multi-gigabit speeds. Most modern routers, including budget-friendly Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax) models, can easily handle this speed without bottlenecks . Focus on these factors instead:

- Coverage: Choose a router that covers your home size. For small to medium homes, a single router is sufficient. For larger homes, consider a mesh system to avoid dead zones .
- Device Support: Even with low-speed fiber, ensure the router can handle the number of devices in your household, especially if you have multiple smartphones, laptops, or smart home devices .
- Wi-Fi Standard: Wi-Fi 6 is recommended for future-proofing, but Wi-Fi 5 is adequate for 8 Mbps speeds .
- Ethernet Ports: If you plan to connect devices via cable, ensure the router has enough LAN ports. Even 1 Gbps ports are more than enough for your plan .

Recommended Routers

- TP-Link Archer AX55 – A budget-friendly Wi-Fi 6 router that provides reliable coverage and supports multiple devices. Ideal for small to medium homes .
