

What router should I use for fiber optic repeaters

Summary of Content

For fiber optic repeaters, choose a high-performance router with Wi-Fi 6 or 7, multiple LAN ports, and strong coverage to maximize speed and stability.

Key Considerations

Compatibility: Ensure the router supports fiber optic connections and has Gigabit or multi-gigabit Ethernet ports to handle high-speed fiber internet without bottlenecks .
Wi-Fi Standard: Opt for Wi-Fi 6 (AX) or Wi-Fi 7 (RS700S) routers, which provide faster speeds, lower latency, and better handling of multiple devices simultaneously .
Dual or Tri-Band Support: Routers with dual-band (2.4GHz and 5GHz) or tri-band capabilities improve performance when using repeaters, reducing interference and maintaining stable connections across extended areas .
LAN Ports and Aggregation: Multiple LAN ports allow direct connections for repeaters or wired devices. Some routers support LAN aggregation, combining ports for higher throughput, which is useful for multi-gigabit fiber setups .
Coverage and Range: Choose a router with strong signal strength and technologies like MU-MIMO and Beamforming to ensure repeaters can extend coverage effectively without signal degradation .

Recommended Routers

- **NETGEAR Nighthawk RS700S (Wi-Fi 7):** Offers speeds up to 19 Gbps, tri-band support, 10G WAN port, and excellent range, ideal for large homes or offices with repeaters .
- **NETGEAR Nighthawk RAXE500 (Wi-Fi 6E):** Provides 10.8 Gbps speeds, tri-band connectivity, and multiple Ethernet ports for high-performance fiber networks .
