

What size router should I pair with a 55 Mbps fiber optic connection

Overview

WiFi 6 or 6E routers with multi-gig WAN ports serve gigabit fiber plans effectively. These handle 25-40 devices, cover homes up to 2,500 square feet, and include advanced features like QoS, VPN support, and guest networks. This is the sweet spot for most fiber households. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. However, you need a router capable of supporting multi-gig speeds to get fiber internet connectivity. I'm Fazlay Rabby — the founder and writer behind Thewearify.
