

What to do when stripping fiber optic cable to fiber optic cable

Summary of Content

Stripping fiber optic cables involves carefully removing the outer jacket and buffer layers in stages to expose the glass fiber without causing damage.

Preparation and Safety

- **Work Area:** Ensure a clean, well-lit workspace free from dust and debris to prevent contamination of the fiber ends .
- **Safety Gear:** Always wear safety glasses to protect your eyes from fiber shards and debris .
- **Tools:** Gather fiber strippers, kevlar scissors, alcohol wipes, fiber cleaver, and inspection equipment .

Step-by-Step Stripping Process

- **Cut the Cable:** Use kevlar scissors to cut the fiber optic cable to the desired length, typically at the midpoint if splicing is planned .
- **Remove the Outer Jacket:**
 - Use a fiber optic cable stripper to remove approximately 2 inches (50 mm) of the outer jacket .
 - Select the correct groove on the stripper for the cable diameter and gently cut without nicking the fiber.
 - Pull off the cut jacket piece carefully.
