

What types of fiber optic cables do companies use

Overview

Cable Types: There are primarily two types of fiber optic cables: single-mode for long-range communication and multimode for medium-range. **Use Cases:** Fiber optic cables are crucial for high-performance data networking and telecommunications, benefiting industries requiring high-speed. There are a wide range of fiber optic cable types, styles, and with different connectors on each end. Connector types play a crucial role in selecting the right cable for specific applications, as different connectors are designed for various environments, space constraints, and high-bandwidth. **Summary:** Fibre optic cables come in various types depending on a specific networking demand. Single-mode fiber (SMF) features an extremely thin core layer measuring 8-9µm in diameter. Multimode OM3/4/5), construction (Loose Tube vs. Tight Buffered), and application environment (Indoor/LSZH, Outdoor/ADSS, or Armored).
