

Which is better fiber optic cable from China Telecom or China Mobile

Summary of Content

China Mobile generally offers more advanced fiber infrastructure and broader experimental deployments, while China Telecom has strong regional coverage and stable service, making the choice dependent on location and specific needs.

Network Infrastructure and Technology

China Mobile is the largest telecom operator in China and the world's biggest purchaser of optical fiber, consistently investing in high-quality fiber optic networks. Its 2025–2026 procurement shows top-tier suppliers like ZTT, Hengtong, YOFC, and FiberHome securing the majority of contracts, reflecting strong emphasis on product quality, delivery reliability, and advanced fiber technologies such as G.654E and multi-core fiber (MCF) for high-capacity networks. China Mobile is also actively testing hollow-core fiber (HCF), which offers ultra-low latency and extremely low loss, particularly useful for latency-sensitive applications like high-frequency trading and data center interconnections. China Telecom, while not detailed in the procurement data, also participates in HCF trials and has built out experimental networks for ultra-low latency transmission. Its fiber network is generally robust, especially in southern China, and it maintains stable broadband service for residential and enterprise users.
