

Will the fiber optic light on the router be on

Summary of Content

A solid fiber optic light on your router usually indicates a proper connection, while blinking or red lights may signal a problem that requires troubleshooting.

Understanding the Fiber Optic Light

The fiber optic light, often labeled PON (Passive Optical Network) or ONT Link, shows the status of your connection to the fiber network.

- **Solid Green Light:** Your router or ONT is receiving a proper fiber signal and is functioning normally, meaning your internet connection should be active .
- **Blinking Light:** This typically indicates the device is attempting to establish a connection or there is an abnormal signal level. It may be part of the normal startup process, but if it continues for an extended period, it could signal a connection issue .
- **Red or No Light:** This suggests a loss of signal, which could be caused by a fiber disconnection, dirty connector, broken patch cord, or an issue from your ISP .

Troubleshooting Steps

- **Check Physical Connections:** Ensure the fiber cable is securely connected to both the router/ONT and the wall outlet. Inspect for visible damage or dirt on connectors .
- **Power Cycle the Device:** Unplug the router or ONT for 30 seconds, then plug it back in. This can resolve temporary signal or startup issues .
