

Wiring method for PZ30 distribution box

Summary of Content

The PZ30 distribution box should be installed securely, wired neatly with proper circuit identification, grounded correctly, and comply with national and international electrical standards for safe and efficient power distribution.

Placement and Installation

- **Location:** Install the PZ30 box in a dry, accessible area with good ventilation, typically at a height of 1.5–1.8 meters from the floor for easy access and inspection ().
- **Mounting:** Surface-mounted boxes are fixed directly on walls, while concealed boxes are embedded with only the panel exposed. Ensure the box is firm, vertical (allowable deviation 1.5°), and the cover fits flush with the wall ().
- **Material:** Use boxes made of flame-retardant thermoplastic or steel, depending on environmental conditions, to ensure durability and safety ().

Wiring Guidelines

- **Circuit Breakers:** PZ30 boxes accommodate 2–30 ways of breakers. Each circuit should have its own breaker and be clearly labeled for identification ().
- **Bus Bars and Terminals:** Connect live, neutral, and earth wires to the built-in bus bars and earthing terminals. Ensure all connections are tight and secure to prevent overheating ().
- **Wire Management:** Route wires neatly through knockouts or cable entries, avoiding sharp bends. Maintain proper insulation and separation between circuits to reduce the risk of short circuits ().
